Press Release Chennai May 30th 2012. (Vaso-Meditech Pvt Ltd, exclusive distributor and clinical support for EECP in India)

Vaso-Meditech Pvt Ltd: **Dr.S.Ramasamy** director of Vaso-Meditech Pvt Ltd presented his view on **“Enhanced External Counter Pulsation treatment a holistic approach to Cardiovascular disease”** in Popular Malayalam News Channel Kairali People. The program covered how EECP can be a boom to the heart patients who don't want to undergo invasive treatments like bypass surgery and angioplasty. In this program how the two different treatments one from Indian traditional medicine Ayurveda and other treatment from the western world called EECP are combined to give maximum benefit to cardiac patients.

Traditionally treatment for cardio vascular disease was either invasive treatment like bypass and Angioplasty or through medical management. EECP is a new treatment which utilizes the natural mechanism of our body to enhance our health. Hence it has no adverse effect which is experienced in the traditional allopathic treatment.

When EECP is incorporated with Holistic approach Ayurveda treatment it can give immense benefit to the patient. It not only treating the symptoms but also treats the disease itself. EECP when combine with Ayurvedic medicine, “Yoga and Panchakarma will not only can help to improve the blood supply to the heart and avoid bypass surgery and Angioplasty but will also restore your overall health and arrest the progression of the disease” commented by Dr.S.Ramasamy in his interview.

Now this new treatment has altered the way cardiology practice is done for the past two decades. When your doctor talk about the patient undergoing high risk angioplasty or bypass surgery then he should also be giving you EECP as a safe alternative. This treatment will open a new era for cardiac patients who want to avoid interventional procedure. EECP is already FDA approved and covered by insurance companies. Combining EECP with traditional Indian Ayurvedic medicine will go a long way healing many cardiac patients and help them to get back to their routine works.
