### **Press Release Chennai April 22<sup>nd</sup> 2012. (Vaso-Meditech Pvt Ltd exclusive distributor and clinical support for EECP & SphygmoCor in India)**

**Vaso-Meditech Pvt Ltd** participated in World Congress of Cardiology 2012 : Dubai, 18-21 April 2012. Three abstract were presented as poster presentation in the conference. The abstract was jointly presented along with Chennai Heart failure center based in Chennai and Sri Ramachandra University Chennai.

The abstract title presented

1. Effect of Enhanced External Counterpulsation treatment on Ejection Fraction in patients with Moderate Left Ventricular Dysfunction. Dr.S.Ramasamy, Dr.P.G.Gandhi, Dr.M.Dhanapal. Chennai Heart Failure Clinic.
2. Prevalance of Risk Factors For Coronary Artery Disease in Middle Income Group in South Indian Population. S.Thanikachalam, J.Sathya Narayana Murthy, M.Ramesh, S.Ramasamy, V.Harivanzan, C.Anbarasi. Sri Ramachandra University Chennai.
3. Prevalence of Vascular stiffness, a marker of future vascular events in age matched population in Normal Population Versus Hypertension Population and Diabetic Population. S.Thanikachalam, S.Ramasamy, V.Harivanzan, C.Anbarasi.

The posters were well attended by National and International delegates. EECP has shown a clear benefit in patient with compromised Left ventricular function by not only improving the quality of life but also have significant effect in Left ventricular remodeling by reducing the LV systolic and diastolic volume. Other two abstracts from the large epidemiological study has included SphygmoCor device to assess the arterial stiffness and central blood pressure in their parameters, which shows the increasing acceptance of measuring vascular stiffness.

Dr.S.Ramasamy Director of Vaso-Meditech commented that the company will further work to expand the indication of EECP therapy in India. We are also planning to build an awareness campaign to show “Central pressure better predict outcomes than brachial pressure” and using pulse wave analysis in cardio vascular drug management can be titrated more effectively.

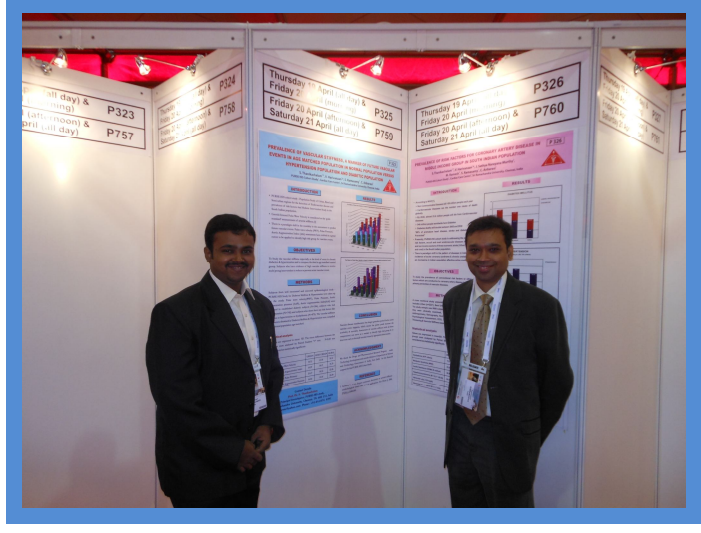

EECP Therapy: Non-Invasive therapy for patient with Angina and heart failure. The treatment works by naturally improving the blood supply to the heart muscle by opening the dormant collaterals and by forming new vessel around the blocked artery. Recent evidence shows the treatment also helps to improve the vascular function of the entire vascular system.

SphygmoCor: A Non-Invasive painless diagnostic system to assess the blood pressure close to the heart what is known as central blood pressure. The system can also give information about your arterial stiffness. Using the system we can assess the impact of cardiovascular risk factors in your arteries. If the arteries are damaged it leads to increase stiffness and vascular ageing. Premature vascular ageing can be determined by SphygmoCor.

Physicians who needs the copy of the Abstract can e-mail or call our office.

## About Us:

Vaso-Meditech Pvt Ltd company was incorporated on 2001 is an exclusive distributor for Vasomedical Non-Invasive cardiac treatment Enhanced External Counterpulsation and Atcor Medical Non-Invasive central blood pressure and arterial age assessing device SphygmoCor. Vaso-Meditech has established service and clinical network across India to support the products technically and clinically. The company has supported publication of various research articles in major peer review journal in India and abroad. The Company also provides other noninvasive medical equipment including Holter monitors and 24 Hr ambulatory blood pressure monitors. Additional information is available on the Company's website at [www.vasomeditech.com](http://www.vasomeditech.com), [www.healurheart.com](http://www.healurheart.com)
